I. INTRODUCTION

Problem Statement: In order to solve Lesedi's problem, you are required to build a web application that allows Lesedi to use the input boxes, in the contract template, to fill the dynamic values. In addition, you must style the contract to closely resemble the 3-page contract template that Lesedi provided.

Test Cases

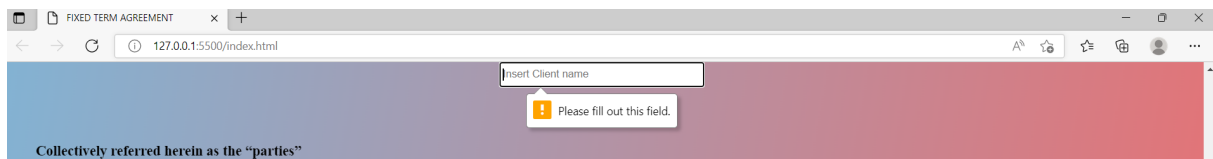

Fig. 3: Test Case: Attempt to submit form with missing fields. All fields are required

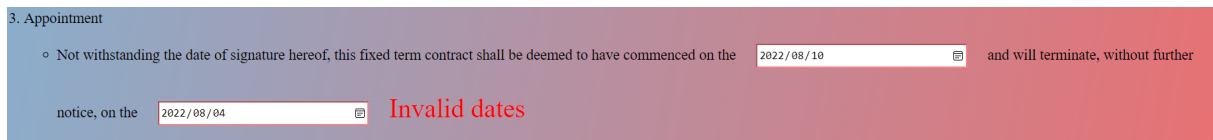

Fig. 4: Test case: Fill in incoherent dates. Dates must be coherent

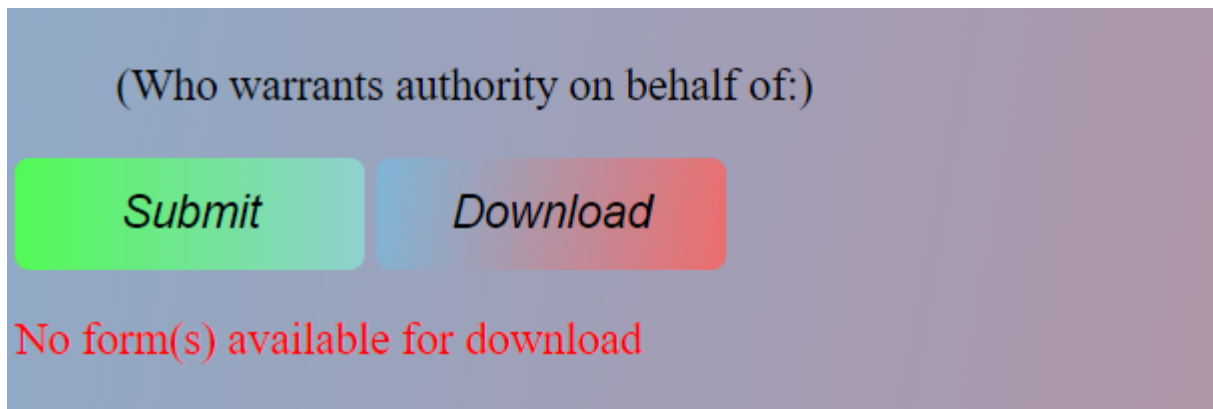

Fig. 5: Test Case: Attempt to download prior to any form being submitted

III. CONCLUSION

The project design and implementation was a success. The downloaded PDF has some formatting issues but can be resolved given some more time to tweak. The data is stored on the local storage of the browser as arrays of client attributes.
